Reviewed 30 October 2026. Figures describe dated delivery checkpoints, not current live inventory or an uptime guarantee.

DOCUMENTED DELIVERY OUTCOMES

6	2	91,724	18
Backend Services	**Portal Deployments**	**Application Blobs**	**CSI Secret Keys**
.NET 8 on AKS	App Service smoke validation	Exact name/size checkpoint	Temporary vault role revoked

24	18	3	6
Workflow Branches	**Promotion Checks**	**Blob Containers**	**Backend Digests**
Historical six-repo alignment	Historical merge dry-runs	12.24 GB replicated	September migration record

PLATFORMS UNDER MANAGEMENT

Platform	Stack	Scale
Mosadad (Insurance Recovery)	Azure AKS, Terraform, .NET 8, Angular, App Service	Six AKS backends, two portals; separate Functions and VM payment paths. Five overlay configurations, not a live cluster count.
ActionAI (AI Automation)	Azure AKS, Helm, Argo CD, GitHub Actions, APIM, Key Vault	1 microservice onboarded E2E, platform docs & cleanup

MIGRATION HIGHLIGHTS (2026 H2)

Data Layer — Separate MongoDB to Cosmos RU/serverless and DocumentDB vCore stages; firewall port 10260 diagnosis and application-read validation.

Delivery — Repeatable Swagger operations/server rewrite, historical workflow alignment and a later five-branch source-contract guard.

Blob Migration — Read-only source, no-delete target access, bounded SDK copy and exact inventory comparison; temporary resources removed.

Staging2 — Phased infrastructure, secrets, data, six backends, API routing and two portal smoke tests; legacy staging retained as the boundary.

SCOPE OF DELIVERY

Infrastructure — Terraform modular IaC (AKS, APIM, App Service, Key Vault, networking, monitoring)

Security — WAF_v2, Azure Firewall, APIM rate limiting, Key Vault CSI, B2C/Entra ID

Monitoring — Grafana + Prometheus, App Insights APM, alert rules, availability tests

GitOps — Argo CD, Helm umbrella chart, 1 microservice onboarded E2E (repo → CI/CD → Helm → Argo → APIM)

Kubernetes — Kustomize, environment-specific scaling, NGINX/Gateway API experience, CSI-backed Secrets

CI/CD — GitHub Actions DRY workflows, Docker → ACR → AKS → APIM auto-import

Data — MongoDB-compatible databases, DocumentDB vCore, Redis and Blob Storage

Documentation — Platform cleanup, READMEs, Confluence, architecture diagrams, handover readiness

CERTIFICATIONS

AWS Solutions Architect – Associate | AWS Cloud Practitioner | Microsoft SC-300 (Identity & Access) | McKinsey Forward Program

Evidence limits: September Gateway API handoff differs from October NGINX source; controller ownership needs reconciliation. Authenticated UAT and notifications remained follow-ups. Blob parity was name/size validation, not a checksum audit. Declared HA/replicas do not establish tested restore or RPO/RTO.
